

# Your Trusted

# Nordic Base Operations Partner

- \_ We enhance readiness
- \_ We enable technology access
- \_ We fill capability gaps

Serving a  
Stronger  
Society

MW Group

## Introduction

**We are your trusted Nordic partner for host nation support and multi-domain operations.**

Our Base Operation offerings are designed to be flexible and quick. Our most important asset is to build capabilities together with our partners. We are fast, results-oriented and always ready to serve.

We operate as a Nordic product-independent service integrator by partnering with armed forces and the defence industry to enhance readiness, ensure access to technology, and fill capability gaps.

Our home in the Nordics with arctic conditions is our core environment, and we follow our customers wherever and whenever they deploy.

## Our Base Operation Solutions

## Connectivity and Power Supply

We install, operate and maintain the critical infrastructure needed for military operations.

We offer a complete service portfolio of mobile and fixed communication networks and private networks, and our power solutions are modular, clean, robust and quiet.

Our field technicians and Linux experts provide secure unclassified networks and cyber secure power supply.

## Integration Solutions

We are your product independent partner for integration solutions in the Nordics.

We are project-oriented in our approach and are prepared to support our customers all over the Nordics.

Our experience ranges from technical integration to deployed services and life-cycle management.

## Training Support

Our heritage is from the Nordic defence forces, and through that we appreciate the absolute necessity of advanced and comprehensive training.

We are experienced and ready to support armed forces and OEMs in exercises and training support.

Being product-independent, we can take on projects of any system and we can support all over the Nordics.

## Robust Logistics

To meet the non-linear hybrid threat of the modern conflict, we have developed LogSec as a platform that operates as a support unit for logistics solutions.

This solution is based on dual use capabilities that can be transferred on short notice into military use.

We are the guarantor of accessibility of services wherever and whenever they are needed.

## Connectivity and Power Supply

As a tier one supplier of 5G network implementation and maintenance alongside our cyber capability to deploy and develop secure unclassified networks, we are both ready and capable to provide host nation support in the Nordics as well as an enabler of multi-domain operations.

We are product agnostic, and we welcome our partners to our Network Operations Centre and Security Operations Centre for a 24/7/365 guardian over your assets.

Utilizing our field technicians and in partnership with Ingrid Capacity, we stand ready to deliver a turn-key solution of large-scale batteries – for military bases, OEM operations and for field deployments.

## Integration Solutions

---

**To meet the increased needs of the armed forces, we stand ready as a product-independent integrator with our Nordic-wide organisation of competent technicians to serve the armed forces and OEMs.**

Our core competency is within technical systems, project management and logistics including storage.

## Training Solutions

---

**Training is critical and we are here to support armed forces and OEM partners where and when they need us.**

We have the expertise to set up training projects for fast deployment or long-term projects to support the integration of new equipment – in practical training as well as doctrine development.

We provide instructors, design of training programs and in the field support for all the Nordics.

## Robust Logistics

**We have developed a robust, flexible and scalable logistics concept for sustainment capabilities in the Nordics and deployed internationally under the brand of LogSec.**

We believe that modern non-linear hybrid warfare calls for solutions that can be quickly scaled to meet urgent needs with difficult requirements.

LogSec is a platform that contracts, trains and controls suppliers with dual-use capabilities to enhance readiness and to fill capability gaps in a wide range of service segments.

## Work with the best

We have a proactive approach to delivering embedded services that enables our clients to concentrate on their core business. All of MW Group works with maximum readiness in mind, while aiding our clients during all levels of conflict – from small to large scale.

We at MW Group pledge to be:

- Entrepreneurial, fast and agile
- A long-term partner
- Representative of our military solid heritage
- Employees that are security-vetted
- Focused on a readiness driven approach
- Adoptable to our customers' needs
- Executive, engaged and enduring
